

1. Plan

Predict fuel/energy consumption and CO₂ emissions, optimizing every journey in advance.

2. Drive

Get real-time driving suggestions, with speed and acceleration adjusted for traffic, weather and load conditions.

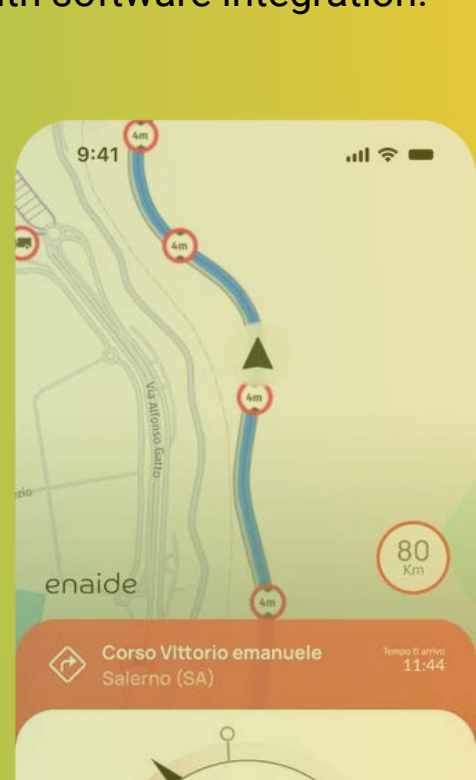

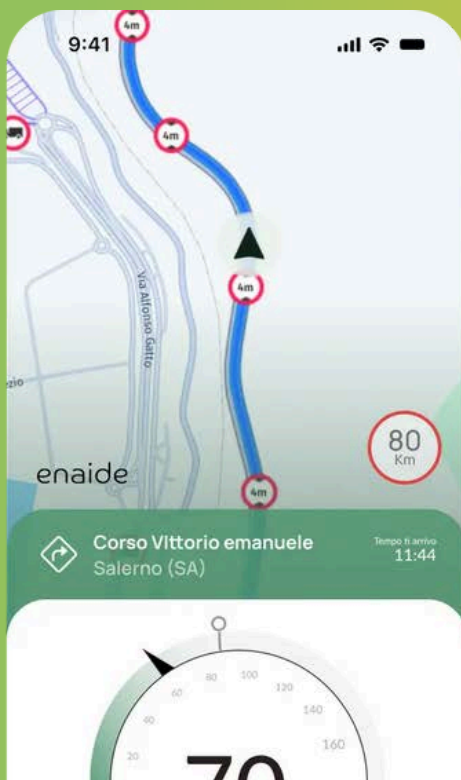

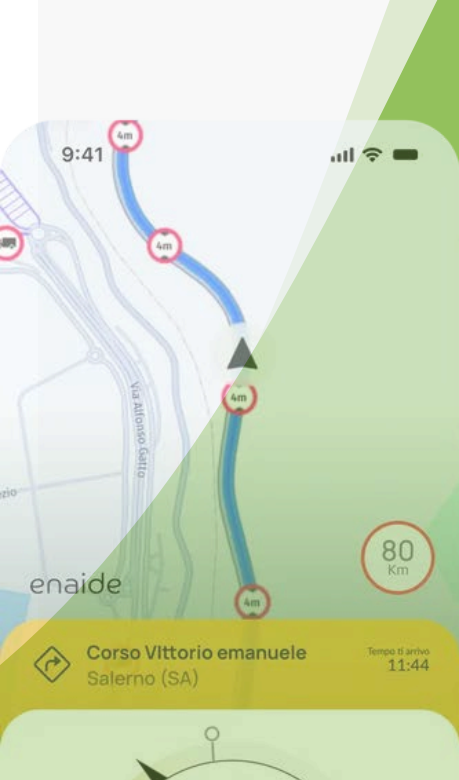

3. Analyze

Monitor and analyze vehicle performance with detailed reports on consumption, emissions, and driving style.

up to 30%
saving per vehicle

enaide

The **eco-driving system** provides **adaptive navigation** with advanced **gamification** functions. The product portfolio offers **predictive consumption analysis, driving style assessments** and personalized **Scope3 reports**. The data base is made up of information continuously acquired **from the vehicle and the road**, interacting with proprietary hardware (**OBU**) or with software integration.

less energy more business
less emissions more planet
